

MyGs

Goals for each one of us

Sustainable manufacturing

in a clean, attractive factory.

MIURA AQUATEC CO., LTD

MIURA AQUATEC was established in 2010 as an integrated factory that performs everything from production of water treatment equipment parts through to assembly, start-up operation, and shipping of the final products. The factory that makes the chemicals used for boilers (water treatment equipment) is also located here, and was the first in the industry to acquire food safety management system ISO 22000 certification, fulfilling the strict quality requirements of manufacturers of both food and pharmaceutical products. As a clean, attractive factory, we actively engage in PR activities and invite people from outside our organization to tour our premises. In the manufacturing workplace, we seldom see how our products are actually used, but we are aware that the trust of the whole MIURA Group is built upon the fact that our customers are able to use the products that we have assembled, in their factories safely and with peace of mind. That is why we have adopted "Manufacturing from a user's perspective" as our motto, and strive daily to achieve zero quality defects at our customer sites. While promoting the "autonomation," which means automation with human intelligence, and increased efficiency of machinery in the manufacturing workplace, we provide visual representation of our operational know-how and achievements, and are working to eliminate human error completely. We are also actively engaged in energy conservation activities and endeavoring to address environmental issues throughout the factory. With recycling of molded products, reuse of chemicals in drums, and manufacture of products for environmental analysis, we promote sustainable manufacturing from a global perspective.

MIURA AQUATEC CO., LTD

TO YOU

Please take note of our cleanliness and cheerful atmosphere in our factory, and the conscientiousness with which we go about our work.

Sustainable Development Goals (SDGs) are shared goals for international society to be achieved by 2030, adopted at the United Nations summit in September 2015. They comprise 17 goals for achieving a sustainable world.
