

# MyGs

Goals for each one of us

**We hope to increase customer satisfaction**

**by engaging in "manufacturing from a user's perspective".**

We manufacture various kinds of products, from small ones like simple boilers to large ones as big as 20 meters. There are hundreds of options, and we have the latest metalworking equipment and precision machining technology to handle them. A distinctive characteristic is that we manufacture pumps and other parts in-house, being particular about machining methods, including piping thread cutting. To ensure that our customers can use our stainless steel products, pressure vessels, and other products with peace of mind, welding meisters who have won national welding contests pass down their technique to younger workers. This high-level welding technology is put to use in the manufacturing of our products. The slogan at MIURA MANUFACTURING job sites is "manufacturing from a user's perspective," and we are very particular about quality. We share information about complaints, educate our employees, and engage in 5S activities to ensure that we meet ever higher requirements. Coordinating with the Design and Material Procurement departments at the head office and partner companies, we share opinions on how to improve quality.

We are proud that the products we create help reduce the environmental impact of our customers. In recent years, we have been reducing the amount of environmental waste we generate by collecting and reusing cardboard boxes and gradually switching from organic solvents, which are a concern from the standpoint of human health, to water-based paints and working to reduce the amount used. This is another way in which we engage in manufacturing from a user's perspective.

MIURA MANUFACTURING CO., LTD

**MIURA MANUFACTURING CO.,LTD**

TO YOU

Come to our manufacturing group for all your manufacturing needs. We'll make quality products that you can be proud of.

Sustainable Development Goals (SDGs) are shared goals for international society to be achieved by 2030, adopted at the United Nations summit in September 2015. They comprise 17 goals for achieving a sustainable world.
