

【IMPORTANT】 Prevention of Miura BWMS Trouble ①

Daily maintenance is important to prevent the filter trouble.
Periodic filter wash keeps the filter normally.

1. Filter wash

After ballasting, be sure to perform the **filter wash**.
Even when the Miura BWMS does not operate, perform the **filter wash** according to the **notice** displayed on the touch panel.

2. Air purge

Even when the Miura BWMS does not operate, perform the **air purge once a week** to discharge water in the filter surely.

3. Touch panel check

Check the touch panel **once a day** to see if there is any notice.
Always turn on the control panel for the safety device to function.

If these maintenance procedures are neglected and the filter differential pressure increases during operation, the trouble may delay the cargo handling.

For inquiries

- Send operation data stored in the SD card. See “Service News Vol.48” for the detail.
- Send the data to the email address hakuyo_mka@miuraz.co.jp with the title “HK DATA (vessel name)”.

If you have any questions, please contact the nearest MIURA office.
