

Parts list will save you trouble of choosing the parts you need!

When requesting parts of BWMS equipment, do you have trouble checking the part name and replacement time?

We have created a parts list that contains all the major parts used in our product of BWMS and drawings showing their mounting locations in one place. By using this sheet to identify and request parts without having to open drawings or operation manuals, we expect to reduce your time and effort.

For details on the specifications of the parts, please provide the ship number or the product's serial number and our staff will look it up for you. Also, the parts list is in Excel format, so you can use it on your computer. The list includes the quantity of part used, required situation, standard delivery time, replacement cycle, possible troubles, and the drawing number and part number of the target part drawing. Please use this list when necessary, such as when requesting parts before docking.

HK/Parts List (Filter Unit)
