Establishment of a Maintenance Branch for Miura's Ship machinery Business in Zhoushan, Zhejiang, China

Miura Co., Ltd. (Head Office: Matsuyama, Ehime Prefecture, President: Yuji Takahashi), Japan's leading manufacturer of small once-through boilers, has announced that its Chinese Local Affiliate, Miura Industries (Suzhou) Co., Ltd. (Head Office: Suzhou, President: 兒島好宏) has established an office in Zhoushan, Zhejiang as an overseas maintenance branch for its ship machinery business.

Details

1. Purpose of the new branch

Following the establishment of the Shanghai maintenance branch in October 2014, Miura has opened a ship machinery maintenance branch in Zhoushan, Zhejiang.

The number of foreign vessels entering dock for repairs in China is increasing, and the company has a growing need for a maintenance organization in China. There is also increasing demand for full maintenance services for Miura's ship machinery boilers, including periodic inspection and repair. In response to these trends, Miura is expanding its ship machinery maintenance branches in China.

The new branch will provide periodic inspection and prompt after-sales service to ships docking in China. In particular, the office will enhance its maintenance services for Miura's new ballast water management system.

In 2004, Miura established Miura Industries (Suzhou) Co., Ltd. as an overseas affiliated company for the manufacture and sale of land boilers. Miura will continue to consolidate and enhance its organization in China to meet the maintenance needs of clients in China, expanding the company's global capabilities.
